

### Median Household Income by Year, Maine, 2005-2010

Year	Median Income	90% Margin of Error
2005 <sup>*</sup>	\$42,801	± \$969
2006 <sup>†</sup>	\$43,439	± \$773
2007 <sup>‡</sup>	\$45,888	± \$710
2008 <sup>§</sup>	\$46,581	± \$892
2009 <sup>  </sup>	\$45,734	± \$935
2010 <sup>¶</sup>	\$45,815	± \$953

<sup>\*</sup> In 2005 inflation-adjusted dollars.

<sup>†</sup> In 2006 inflation-adjusted dollars.

<sup>‡</sup> In 2007 inflation-adjusted dollars.

<sup>§</sup> In 2008 inflation-adjusted dollars.

<sup>||</sup> In 2009 inflation-adjusted dollars.

<sup>¶</sup> In 2010 inflation-adjusted dollars.

Note: "The methodology for calculating median income and median earnings changed between 2008 and 2009. Medians over \$75,000 were most likely affected. The underlying income and earning distribution now uses \$2,500 increments up to \$250,000 for households, non-family households, families, and individuals and employs a linear interpolation method for median calculations. Before 2009 the highest income category was \$200,000 for households, families and non-family households (\$100,000 for individuals) and portions of the income and earnings distribution contained intervals wider than \$2,500. Those cases used a Pareto Interpolation Method." (Source: American Community Survey, 2009, Table B19013)

Median incomes are weighted to be more representative of Maine households.
